Traditional medicine and traditional culture need to develop new energy to obtain a good earth ecology

Abstract:

The Paleozoic and Mesozoic plants in the evolutionary history of the earth became the coal field and petroleum, and the emergence of human beings after the Cenozoic angiosperms developed greatly. Therefore, the Earth's ecology with abundant underground energy and abundant angiosperms is especially suitable for human survival. However, nowadays, the over-exploitation of underground energy and the excessive destruction of forest vegetation have made the earth's ecology unsuitable for human survival. The population of public health diseases such as liver disease, diabetes and cancer patients is huge. Traditional medicine and traditional culture emphasize the earth ecology in which nature and human beings live in harmony. Human beings urgently need to develop new energy to obtain a good earth ecology. The existing solar and wind energy and other green new energy have disadvantages. The earth surface from space particle energy is unlimited access. Based on new materials or green chemistry, space particle energy can be used to generate electricity, stably generating green energy.

Keywords: traditional medicine, traditional culture, earth's ecology, space particle energy, public health diseases

Biography

Dr. Ying Yang studied Infectious Diseases at the Zhejiang University, Hangzhou and graduated as Dr in 2015. She then joined the research group at the State Key Laboratory for Diagnosis and Treatment of Infectious Diseases. She received her MS degree in 2008 at the China Pharmaceutical University. She engaged in inheritance and innovation of traditional medicine and traditional culture. She has published several research articles in SCI journals and has been granted four patents for licensed inventions. Hangzhou Zhongqi Biotechnology Co., Ltd. is founded to promote traditional medicine/traditional culture, whose brand is Mehturt gourd (Qi Yan) (see logo).
