## **Fatal dermatological sequel following depot medroxyprogesterone acetate (dmpa) administration: A catastrophic hypersensitivity case report**

### **Abstract:**

The use of depot progesterone as a contraceptive every three months by a considerable number of Women has raised concerns regarding the potential for hormones and chemicals to trigger fatal immune Responses resulting in skin reactions. The focus of our case report is a 25-year-old woman who suffered a fatal dermatological condition after using this contraceptive. It is noteworthy that this specific Condition has not been documented in medical literature before.
