## Unveiling the Psychological potential of video creation chatbots

### Abstract:

This paper delves into the unexplored realm of the psychological potential of video creation chatbots. As technology continues to advance, video creation chatbots have emerged as innovative tools for content creation, enabling users to generate personalized videos with ease. This study aims to uncover the various psychological impacts that these chatbots can have on users. By examining the cognitive, emotional, and behavioral aspects, we explore how video creation chatbots can influence user experiences, creativity, self-expression, and overall psychological well-being. Drawing upon existing research on human-computer interaction, user experience, and psychology, we present a comprehensive analysis of the potential psychological effects of video creation chatbots.
